AK2000

Super Air Knife

What is the the AK2000?

The AK2000 Super Air Knife is a new generation of air knife that dramatically reduces compressed air usage and noise when compared to other blowoffs. The Super Air Knife offers a more efficient way to clean, dry or cool parts, webs or conveyers. It delivers a uniform sheet of laminar airflow across the entire length with hard-hitting force. At high pressures of 80 PSIG, the sound level is quiet at 69 dBA on most applications.

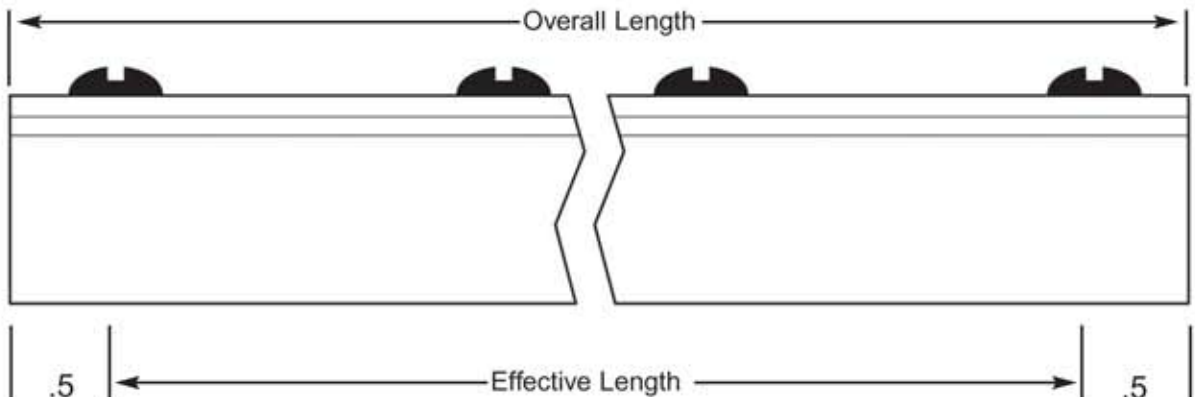

Features

- Compressed air inlets are provided on each end and the bottom of the Air Knife.
- Shims can be easily installed if additional hard-hitting velocity is required.
- Primary air does not impact any surface of the Air Knife for low sound levels.
- Air Knife Kits include filters and regulators.
- Amplification ratios (entrained air to compressed air) of 40:1 are achieved.
- No moving parts- maintenance free
- Variable force and flow
- Add a BR2200 static bar for air ionization

Specifications: AK2000 Air Knife

Standard lengths	3" (76mm)
	6" (152mm)
	9" (229mm)
	12" (305mm)
	18" (457mm)
	24" (610mm)
	30" (762mm)
	36" (914mm)
	42" (1067mm)

Special lengths up to 48" (122cm) and systems up to 120" (3.05m) are available.
